

# Getting Podcasts (Work in Progress)

## The Podcast App

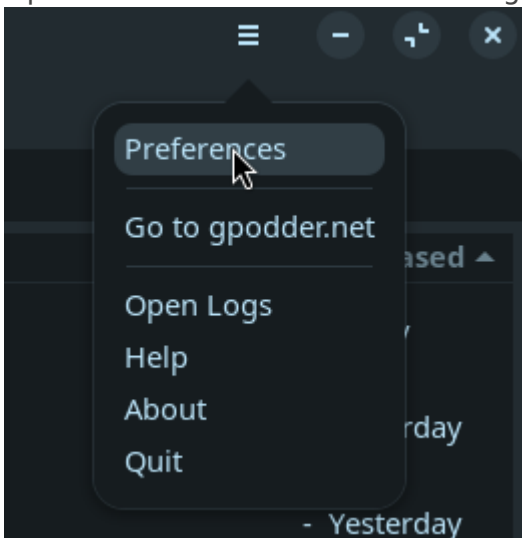

To get podcasts on your iPod with Rockbox. You will need a way download and sync podcasts to your iPod. By the way, Gpodder is my recommended app to fetch podcasts. Although it has a dated User Interface and experience, it is the best app I found for this task on Linux, that is also available for Windows and macOS.

Install Software from link

**Gpodder website:** <https://gpodder.github.io/>

## Setup Gpodder:

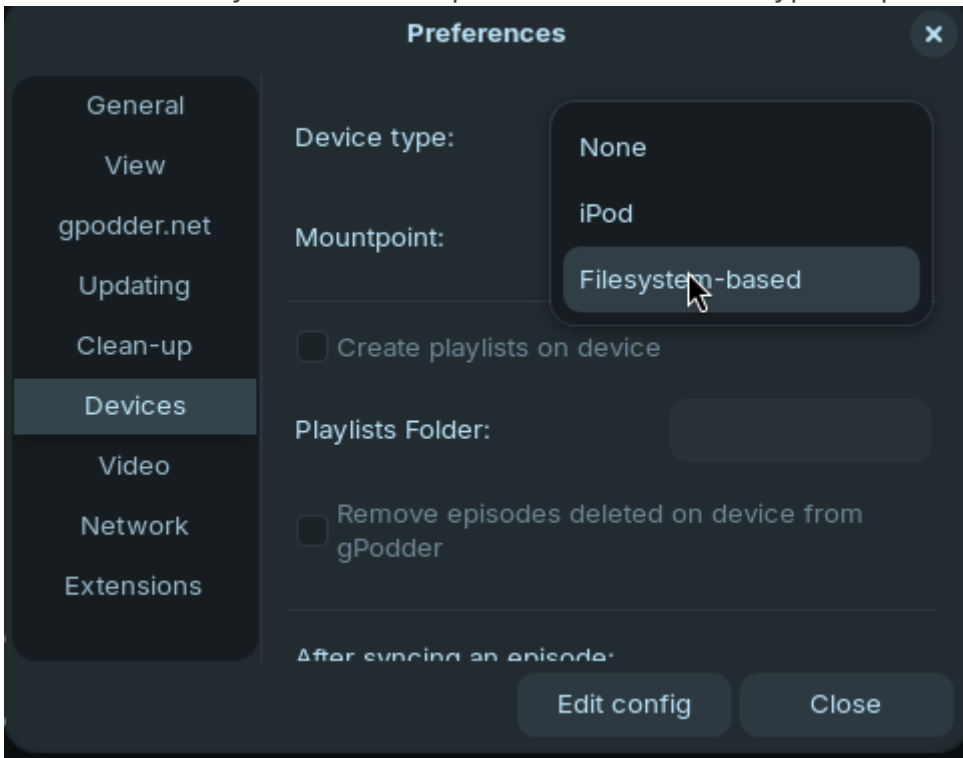

1. Launching the app.
2. Open Preferences from the hamburger menu in the top right corner.

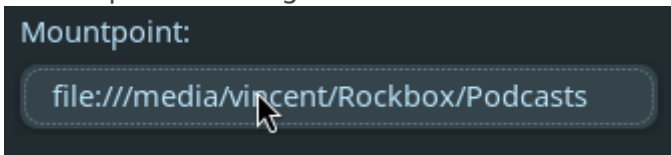

3. Select the device preferences tab.

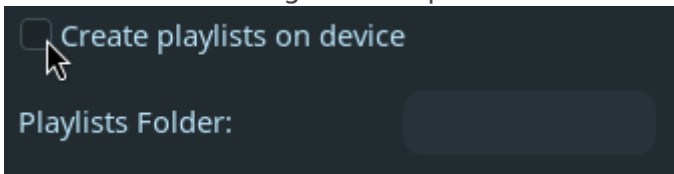

4. Select the "Filesystem-based" option from the device type drop down.

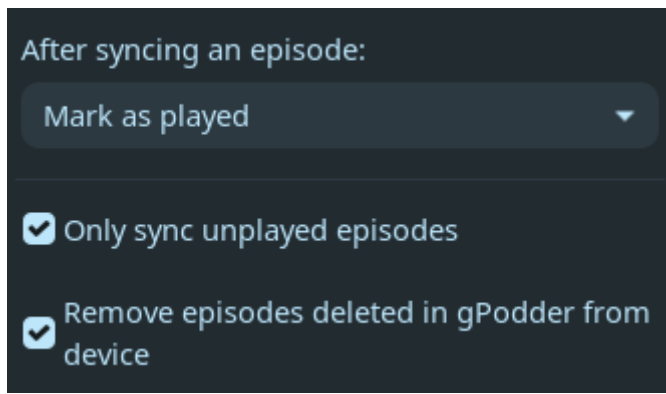

5. Enter or browse for the podcast folder path from the top level of the iPods storage into the "mountpoint" setting.

6. I recommend turning off the option to "Create Playlists on Device".

7. Make sure the remainder options are set like in this image.

## Using Gpodder:
